September 8, 2017

Abstract

In this article I present a ready-to-implement plan for upgrading MacBook Pro(15-inch, late 2011). I cover all aspects of the process so that there are no surprise during execution. I look at ram and hard-drive replacement without any support from Apple Inc.

1 Introduction

I will upgrade RAM and hard disk and add external keyboard and mouse. The Ram up-gradation is straight forward where I will replace the two RAM slots. For hard disk I will keep the existing one (500 GB) in its slot and replace the optical drive with an SSD drive. I will consider the most valuable external keyboard and mouse for up-gradation.
